

TBD

QUICK START

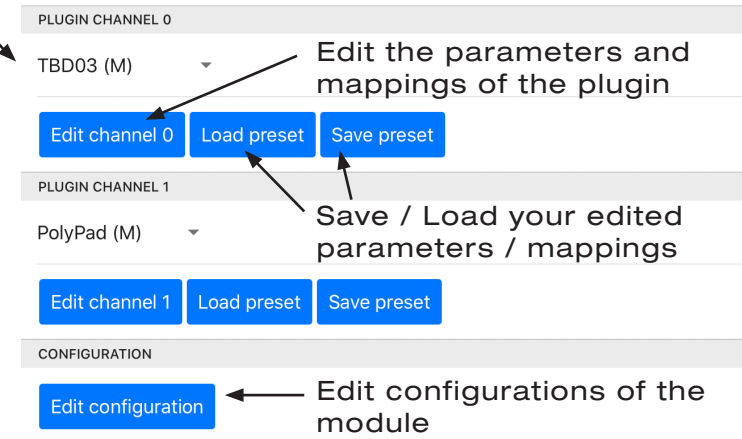

1. Connect power cable (white line on PCB indicates -12V), mount TBD in Eurorack case and power on PSU
2. Connect to TBD WiFi access point (Default SSID: **ctag-tbd**)
3. Open TBD web app with your desired browser (URL: **http://ctag-tbd.local**). Note: If your end device does not support zeroconf network discovery (e.g. Bonjour), type in the default IP instead: **192.168.4.1**
4. Select your desired plugin and configure its parameters
5. Have fun!

Web app:

Choose plugins

Either two mono plugins (M) or one stereo plugin (ST)

Edit the parameters and mappings of the plugin

Save / Load your edited parameters / mappings

Edit configurations of the module

E.g.: Change potentiometers / CV inputs from *unipolar* to *bipolar*; change Wi-Fi mode from *access point* to *station*, to use TBD in your own Wi-Fi
